Customer Offer Engagement Dashboard – User Guide

Purpose

"Customer Offer Engagement Dashboard" in page "Overview" shows how customers respond to promotional offers: how many received, viewed and completed, which offers and customer groups (age-groups) perform best, and how spending changes after an offer is completed.

1. Opening and refreshing the data

- Open **Customer_Offer_Engagement_Project.pbix** in Power BI Desktop.
- The report reads four files: customers.csv, events.csv, offers.csv and data_dictionary.csv.
- To update the data, replace these files in the same folder (same file names), then click **Home → Refresh**. A full refresh takes about 45 seconds (less than a minute).

2. Pages (use the tabs at the bottom to move between pages in Report view)

- **Overview:** key cards – total customers, offers sent, offers completed, redemption rate and average transaction.
- **Offer Funnel:** how many customers received, viewed and completed offers, and purchased again afterwards.
- **Customer Segmentation:** redemption rate by gender, age group, income and year joined, plus an age × income heatmap.
- **Offer Performance:** which offer types, rewards and channels work best, and how difficulty affects completion.
- **Transaction Behaviour:** spending of customers who completed offers vs those who did not, and spending before vs after the first completed offer.

3. Using the slicers

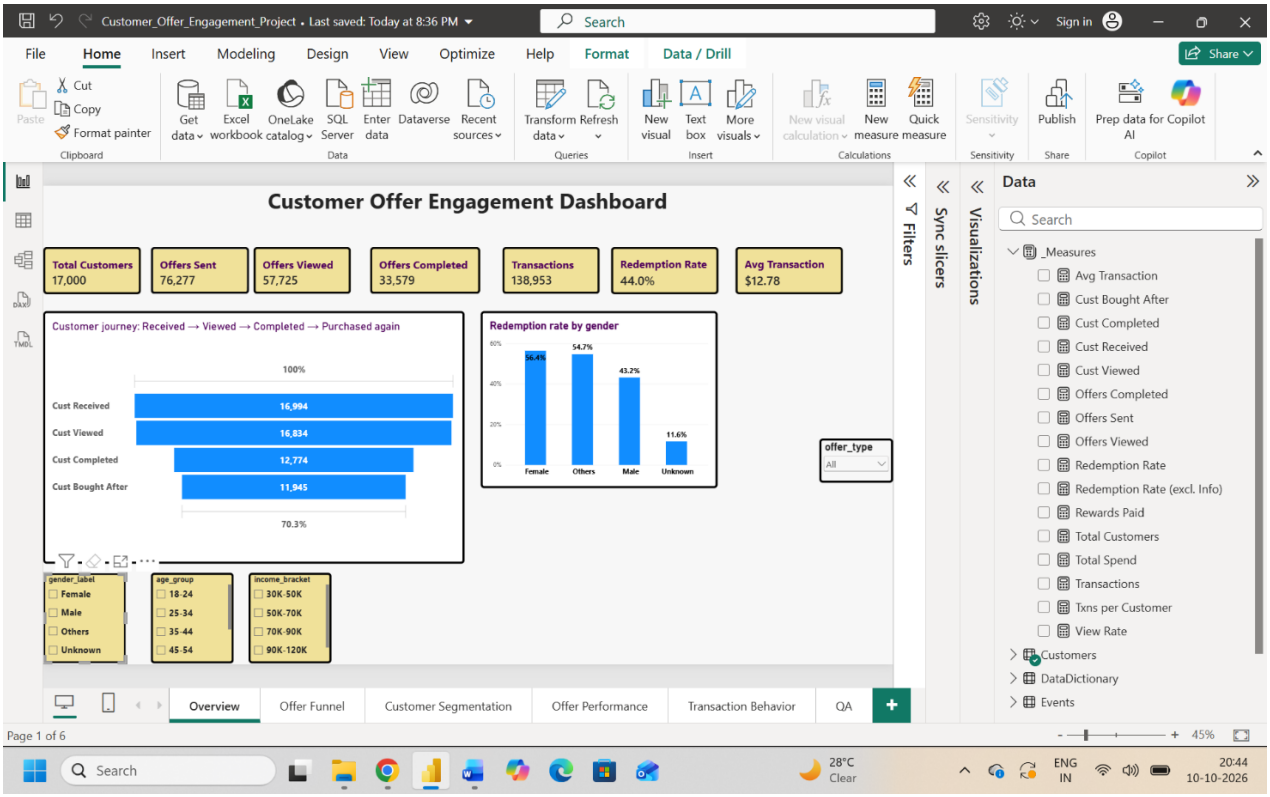

- Four slicers: **Gender, Age group, Income bracket, Offer type**. They are linked across all pages (except QA), so a selection on one page applies everywhere.
- Hold **Ctrl** to select more than one value. Click the **eraser icon** on a slicer to clear it.
- Example: select Female and 55-64 to see how older women respond to offers on every page.

4. Helpful tips

- Hover over a bar or point to see its exact value.
- Click a bar to filter the other charts on the same page; click an empty area to reset.
- Use the **Focus mode** icon (top-right of a chart) to enlarge it.

5. Notes on the data

- **"Unknown"** means the 2,175 customers whose age, gender and income were not provided.
- **Informational** offers cannot be completed, so their redemption rate is always 0%.
- Events cover a 30-day period; "day" and "time" count from the start of that period.
